

FRAGRANCE THROWING LIQUID CANDLE

ABSTRACT OF THE DISCLOSURE

A liquid fuel candle apparatus with a polymeric element impregnated with a fragrant volatile medium includes a wick with an ignitable end and an absorbent end, a receptacle for holding a quantity of fuel, with the absorbent end of the wick in contact with the fuel, a receptacle having at least a first wall which forms a perimeter, with the ignitable end of the wick extending through the receptacle, and a polymeric element impregnated with a volatile medium disposed within the receptacle perimeter, and in substantially continuous contact with the perimeter wall.
